

Creating Databases and Database Files

- Creating Databases
- Creating Filegroups
- Creating Schemas
- Creating Database Snapshots

Creating Data Types and Tables

- Creating Data Types
- Creating Tables
- Creating Partitioned Tables

Creating and Tuning Indexes

- Planning Indexes
- Creating Indexes
- Optimizing Indexes

Implementing Data Integrity by Using Constraints and Triggers

- Data Integrity Overview
- Implementing Constraints
- Implementing Triggers

Using XML

- Using the XML Data Type
- Retrieving XML by Using FOR XML
- Shredding XML by Using OPENXML
- Introducing XQuery
- Creating XML Indexes
- Implementing XML Schemas

Implementing Views

- Introduction to Views
- Creating and Managing Views
- Optimizing Performance by Using Views

Implementing Stored Procedures

- Implementing Stored Procedures
- Creating Parameterized Stored Procedures
- Working With Execution Plans
- Handling ErrorsConfiguration Managemen

Implementing Functions

- Creating and Using Functions
- Working with Functions
- Controlling Execution Context

Implementing Managed Code in the Database

- Introduction to the SQL Server Common Language Runtime
- Importing and Configuring Assemblies
- Creating Managed Database Objects

Managing Transactions and Locks

- Overview of Transactions and Locks
- Managing Transactions
- Understanding SQL Server Locking Architecture
- Managing Locks
